

ACVATIX™

Modulating control valves MXG461S.. with magnetic actuator, PN16

stainless steel

- Fast positioning time (1 s), high-resolution stroke (1 : 1000)
- Selectable valve characteristic: equal-percentage or linear
- High rangeability
- Switch-selected control signal DC 0/2...10 V or DC 4...20 mA
- Wear-free inductive stroke measurement
- Robust, no maintenance required
- Spring-return function: A → AB closed when de-energized
- Positioning control, position feedback and manual control
- Parts in contact with medium in CrNi steel

Use

The control valves MXG461S.. are mixing or through-port valves. They are supplied with the magnetic actuator ready fitted, equipped with an electronics module for position control and position feedback.

The short positioning time, high resolution and high rangeability make these valves ideal for modulating control of open and closed circuits with the highest control requirements.

Type summary

Type reference	DN	Connection [inch]	k_{vs} [m ³ /h]	Δp_{max} [kPa]	Δp_s [kPa]	Operating voltage	Positioning signal	time	Spring return function
MXG461S15-1.5	15	G 1B	1.5	300	300	AC 24 V	DC 0...10 V or	1 s	✓
MXG461S20-5.0	20	G 1¼B	5.0				DC 2...10 V or		
MXG461S25-8.0	25	G 1½B	8.0				DC 4...20 mA		
MXG461S32-12	32	G 2B	12						

DN = Nominal size.

k_{vs} = Nominal flow rate of cold water (5 to 30 °C) through the fully opened valve (H_{100}) at a differential pressure of 100 kPa (1 bar).

Δp_{max} = Maximum permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorized valve (mixing: path A-AB, B-AB)

Δp_s = Maximum permissible differential pressure at which the motorized valve will close securely against the pressure (close off pressure).

Accessory

Type reference	Description
SEZ91.6	External interface for DC 0...20 V phase cut control signal, refer to data sheet N5143

Ordering

Valve body and magnetic actuator form one assembly and cannot be separated.

When placing an order, please specify the quantity, product description and type code.

Example:

Type reference	Stock number	Description	Quantity
MXG461S25-8.0	MXG461S25-8.0	Modulating control valve with magnetic actuator	2

Delivery A CrNi-Stahl seal disc with 3 gaskets is part of the delivery.
Union fittings must be supplied by the installer.

Rev. no.

Overview table, see page 11.

Replacement electronics module ASE1

Should the valve electronics prove faulty, the electronics module must be replaced by the ASE1 replacement electronics module. Mounting instruction no. 35678 is included.

Technical and mechanical design

For a detailed description of operation, refer to data sheet CA1N4028E.

Control operation

The electronics module converts the positioning signal to a phase-cut power signal which generates a magnetic field in the coil. This causes the armature to change its position in accordance with the interacting forces (magnetic field, counter spring, hydraulics). The armature responds rapidly to any change in signal, transferring the corresponding movement directly to the valve plug, enabling fast changes in load to be corrected quickly and accurately.

The valve's position is measured continuously (inductive). The internal positioning controller balances any disturbance in the system rapidly and delivers the position feedback signal. The valve stroke is proportional to the positioning signal.

Control

The magnetic actuator can be driven by a Siemens controller or a controller of other manufacture that deliver a DC 0...10 V, DC 2...10 V or DC 4...20 mA output signal. To achieve optimum control performance, it is recommended to use a 4-wire connection.

Spring return function

If the positioning signal is interrupted, or in the event of a power failure, the valve's return spring will automatically close control path A → AB.

Manual control

MANUAL

The valve control path (ports A → AB) can be opened manually to between 80...90 % of the full stroke (depending on DN) by pressing the hand wheel inwards and turning it clockwise (MANUAL setting). This disables the control signal from the controller, the green LED is flashing.

OFF

To disable automatic control of the valve, press the hand wheel inwards and turn it anti-clockwise (to the OFF position). The valve will close, the green LED is flashing.

AUTO

For automatic control, the hand wheel must be set to the AUTO position (the hand wheel will spring out), the green LED is lit.

Operator controls and indicators in the electronics housing

- 1 Connection terminals
- 2 Hand wheel
- 3 Opening for auto calibration
- 4 DIL switch for mode control

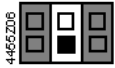

- 5 LED for indication of operating stat

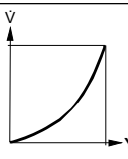

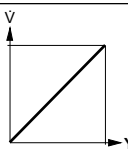

Configuration DIL switch

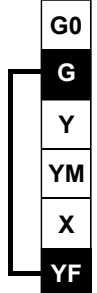

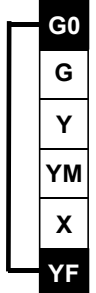

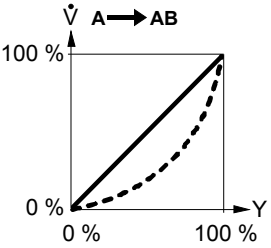

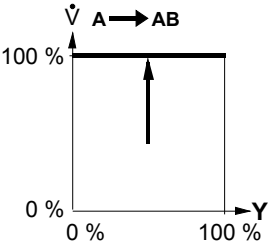

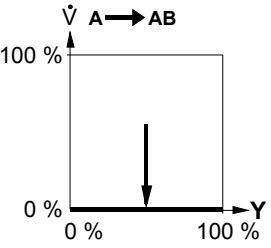

Switch	Function	ON / OFF	Description
 1	Valve characteristic	ON	V_{log} (equal percentage)
		OFF	V_{lin} (linear) ¹⁾
 2	Positioning signal Y	ON	DC 2...10 V, DC 4...20 mA
		OFF	DC 0...10 V ¹⁾
 3	[V] or [mA]	ON	[mA]
		OFF	[V] ¹⁾

1) Factory setting

Selection of positioning signal Y: Voltage or current			Selection of valve characteristic (Positioning signal against volumetric flow): Equal-percentage or linear	
 Y	ON 	ON 	ON 	
ON 	0...10 V	2...10 V	ON 	
ON 		4...20 mA		
				

Forced control input

YF – Function			
	no function	fully open	closed
Connection			
			
Function	<ul style="list-style-type: none"> YF not wired Valve follows Y signal 	<ul style="list-style-type: none"> YF connected with G Valve fully opens above A → AB 	<ul style="list-style-type: none"> YF connected with G0 Valve closes above A → AB

Signal priority

1. Hand wheel position MANUAL (open) or OFF (closed)
2. Forced control signal YF
3. Signal input Y

Calibration

The MXG461S.. magnetic valves are factory-calibrated at 0 % and 100 % stroke.

When commissioning the valves, however, (especially under extreme conditions of use) there may still be some leakage via control path A → AB with a 0 % stroke control signal (DC 0 V, DC 2 V or DC 4 mA).

In this case, the valve can be recalibrated simply and quickly:

1. Set hand wheel [2] in AUTO-position.
2. Activate calibration using a pointed pin (ø 2 mm) by pressing the button in the opening [3] once.
3. While recalibration is in progress, the LED [5] is flashing green for approximately 10 seconds.

The valve will be briefly closed and fully opened.

If the electronics module is replaced, the valve's electronics must be recalibrated. For that, the hand wheel must be set to AUTO.

Indication of operating state

The two-color LED display indicating operating status can be viewed by opening the cover of the electronics module.

LED	Indication	Function	Remarks, troubleshooting
Green	Lit 	Control mode	Automatic operation; everything o.k.
	Flashing 	Calibration In manual control	Wait until calibration is finished (green or red LED will be lit) Hand wheel in MANUAL or OFF position
Red	Lit 	Calibration error Internal error	Recalibrate (operate button in opening 1x) Replace electronics module
	Flashing 	Mains fault	Check mains network (frequency or voltage outside operating range)
Both	Dark 	No power supply Electronics faulty	Check mains network, check wiring Replace electronics module

As a general rule, the LED can assume only the states shown above (continuously red or green, flashing red or green, or both off).

Sizing

Flow chart

Δp_{v100} = differential pressure across the fully open valve and the valve's control path by a volume flow V_{100}

V_{100} = volumetric flow with valve fully open (H_{100})

Δp_{max} = maximum permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorized valve (mixing: path A-AB, B-AB)

100 kPa = 1 bar \approx 10 mWC

1 m³/h = 0.278 l/s water at 20 °C

Valve characteristic

Equal percentage

Volumetric flow

Linear

Volumetric flow

Connection type ¹⁾

4-wire connection

The 4-wire connection should always be given preference!

Type reference	S_{NA} [VA]	P_{MED} [W]	S_{TR} [VA]	I_F [A]	wire cross-section [mm ²]		
					1,5	2,5	4,0
MXG461S15-1.5	29	5	50	3,15	70	110	170
MXG461S20-5.0							
MXG461S25-8.0							
MXG461S32-12							

S_{NA} = nominal apparent power for selecting the transformer

P_{med} = typical power consumption

S_{TR} = Minimal required transformer power

I_N = required slow fuse

L = max. cable length; with 4-wire connections, the max. permissible length of the separate 1.5 mm² copper positioning signal wire is 200 m

¹⁾ All information at AC 24 V

Engineering notes

Conduct the electric connections in accordance with local regulations on electric installations as well as the internal or connection diagrams.

Safety regulations and restrictions designed to ensure the safety of people and property must be observed at all times!

In open circuits, there is a risk of valve disc seizing caused by scale deposits. Additionally, periodic actuation (twice or three times per week) must be planned.

With closed and open circuits always use a strainer upstream of the valve to increase the valve's functional safety.

Mounting notes

Mounting and operating instructions are printed on the actuator and on the electronics module.

Caution

The valve may only be used as a mixing or through-port valve, not as a diverting valve. Observe the direction A → AB of flow!

Orientation

Degree of protection valid only with M20 cable gland supplied by the installer.

Access for installation

It is essential to maintain the specified minimum clearance above and to the side of the actuator and/or electronics module! (refer to «Dimensions», page 11).

Use as straight-through valves

Only three-way MXG461S.. valves are supplied. They may be used as straight-through valves by closing off port «B».

MXG461S.. threaded valves in straight-through applications

Close off port B with a union fitting.

A CrNi-Steel seal disc with 3 gaskets is part of the delivery.

Union fittings conforming to ISO 49 / DIN 2950 must be supplied by the installer.

Installation notes

- Do not use hemp for sealing the valve body threads.
- The actuator may not be lagged.
- The MXG461S.. valves are flat-faced allowing sealing with three gaskets provided.
- For notes on electrical installation, see «Connection diagram», page 9.

Maintenance notes

The valves and actuators are maintenance-free.

The low friction and robust design make regular servicing unnecessary and ensure a long service life. The valve stem is sealed from external influences by a maintenance-free gland.

If the red LED is lit, the electronics must be recalibrated or replaced.

Repair

Should the valve electronics prove faulty, the electronics module must be replaced by the ASE1 replacement electronics module. Mounting Instruction no 35678 is included.

Always disconnect power before fitting or removing the electronics module.

After replacing the electronics module, calibration must be triggered in order to optimally match the electronics to the valve (refer to «Calibration», page 4).

Under operating conditions within the limits defined by the application data, the actuator will become hot, but this does not represent a burn risk. Always maintain the minimum clearance specified, refer to «Dimensions», page 11.

Disposal

The actuator must not be disposed of together with domestic waste. This applies in particular to the PCB.

Legislation may demand special handling of certain components, or it may be sensible from an ecological point of view.

Current local legislation must be observed.

Warranty

Application-specific technical data must be observed.

If specified limits are not observed, Siemens Switzerland Ltd / HVAC Products will not assume any responsibility.

Valve body, magnetic coil and steel bracket form one integral unit. Dismantling destroys the magnetic valve.

Technical data

Functional actuator data

Power supply	Extra low-voltage only (SELV, PELV)	
	Operating voltage	AC 24 V, +20 / -15 %
Frequency	45...65 Hz	
	Typical power consumption P_{MED}	5 W
Stand by	< 2 W (valve closed)	
	Apparent power S_A	29 VA
Min. power of transformer S_{TR}	50 VA	
	Required fuse I_F	3,15 A, slow
Input	Positioning signal Y	DC 0/2...10 V or DC 4...20 mA
	Impedance	DC 0/2...10 V 100 k Ω // 5nF (load < 0.1 mA) DC 4...20 mA 100 Ω // 5nF
