

ACVATIX™

## 2-port and 3-port control ball valves, PN 40, with externally threaded connection

VAG61.., VBG61..

**For use in heating, ventilation, and air conditioning plants as control or shutoff valve.  
In closed circuits.**

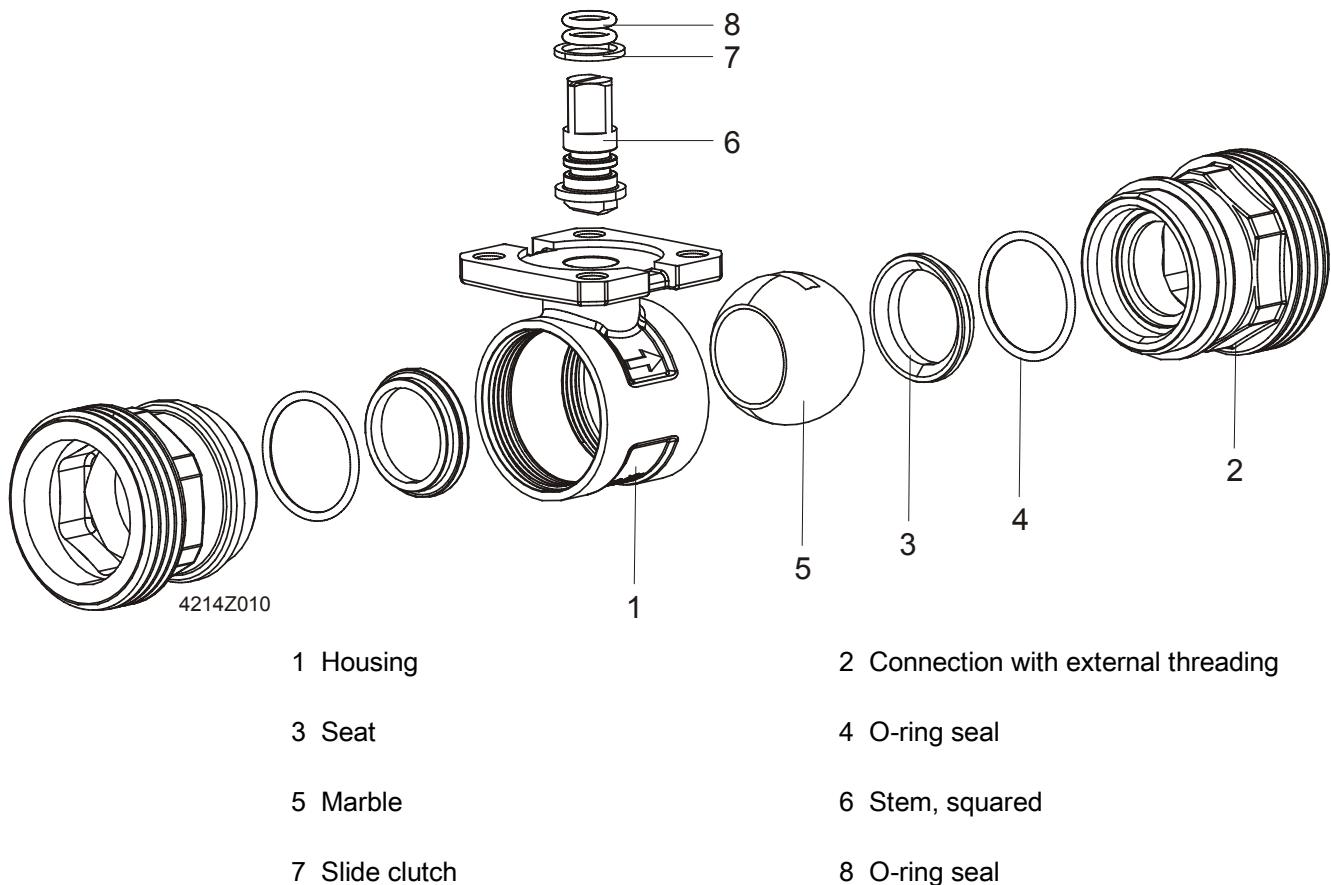

- Ball valve body made of brass CW602N (DZR)
- DN 15...50
- kvs 1...63 m<sup>3</sup>/h
- Flat sealing, externally threaded connections G..B, as per ISO 228-1
- Fitting sets ALG.. with threaded connection
- Rotational angle 90°
- Can be combined with electromotoric rotary actuators GQD..9A, GMA..9E with
- Spring return and GDB..9E, GLB..9E without spring return
- For applications with auxiliary functions (e.g. auxiliary switchs, potentiometers, standard rotary actuators from the DAC product range can also be combined)

## Features

- **Moderately price:**  
Optimized flow rates mean smaller ball valves can be selected. Low torque means you can combine them with small, less expensive rotary actuators.
- **Long life expectancy:**  
Maintenance-free construction, also thanks to low friction stem and polished ball made of chrome-plated DZR brass.
- **Simple mounting:**  
The brackets, premounted on the actuators, means you can mount them on the ball valves without tools.

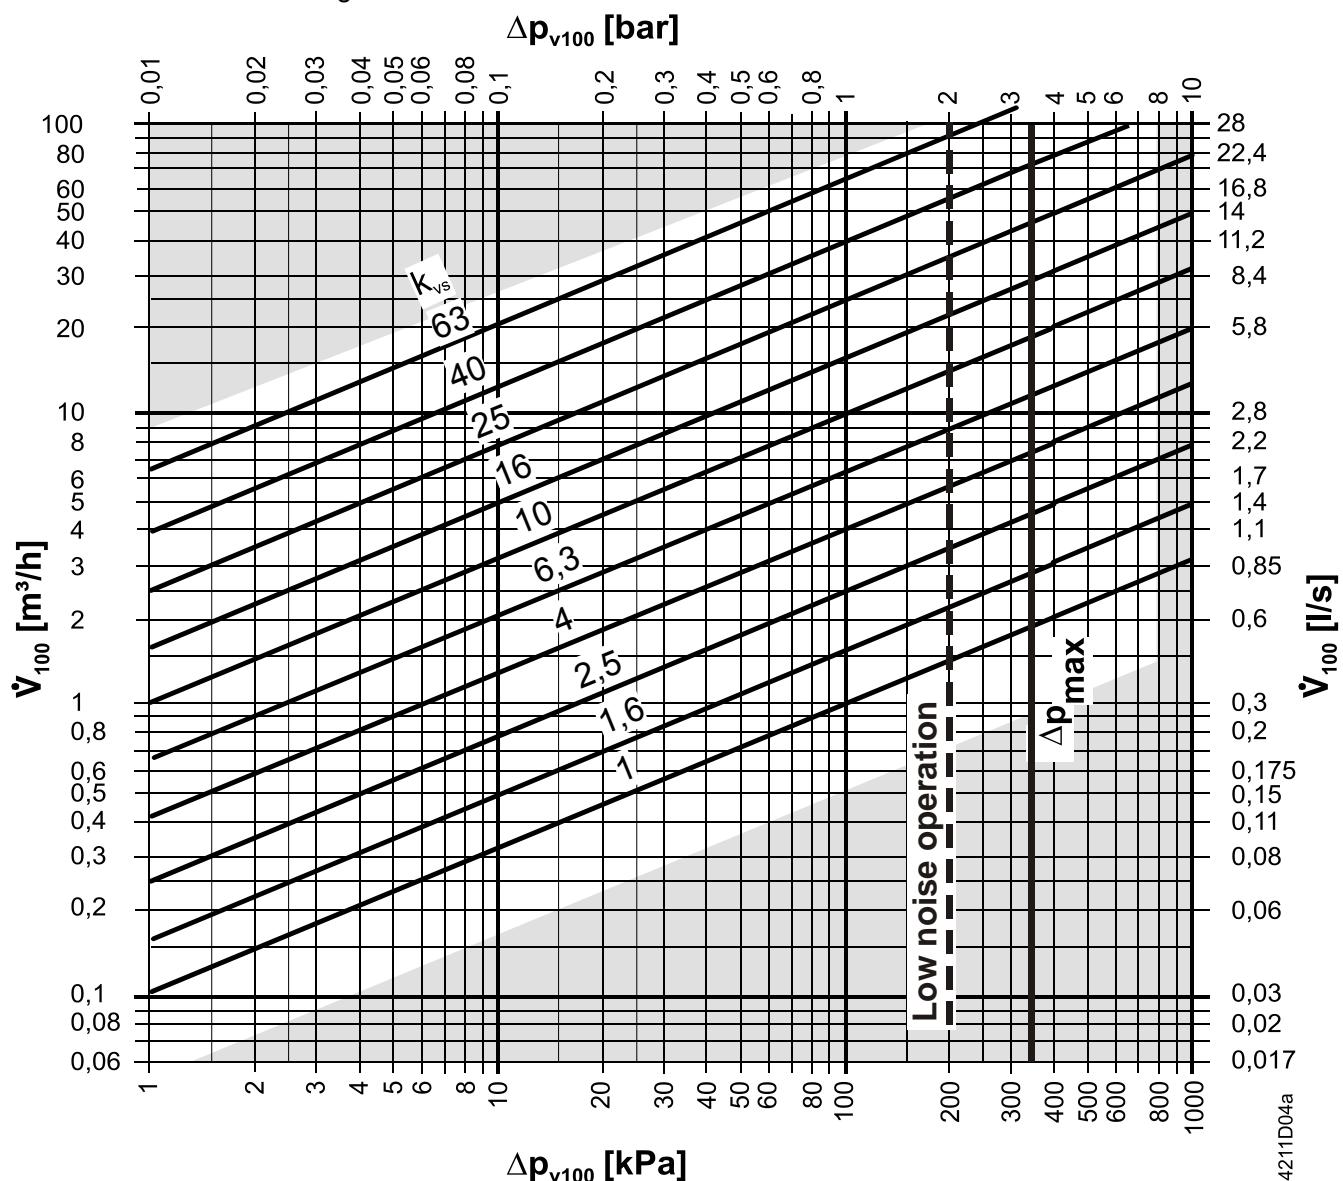

## Technical design

### Design

## Sizing

Flow diagram:

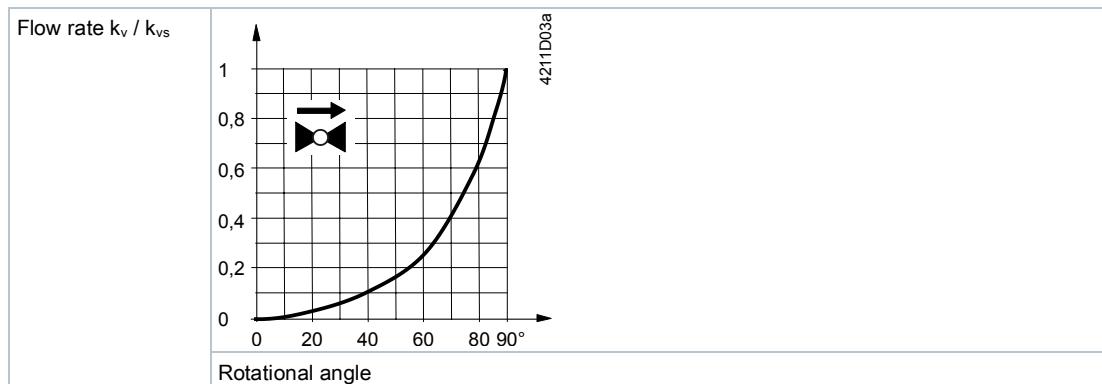

---  
 $\Delta p_{\max}$  for VAG61.. and VBG61.., for details, see table on equipment combinations

- $\Delta p_{\max}$  = Maximum permissible differential pressure over the ball valve, valid for the entire positioning range of the ball valve rotary actuator unit; if low noise operation is desired, we recommend a maximum permissible differential pressure of 200 kPa
- $\Delta p_{v100}$  = Differential pressure over the fully opened ball valve and over the control path at a volume flow  $V_{100}$
- $V_{100}$  = Volume flow through the fully opened ball valve
- 100 kPa = 1 bar  $\approx$  10 mWS
- 1  $\text{m}^3/\text{h}$  = 0.278 l/s water at 20 °C

## Ball valve characteristic curve

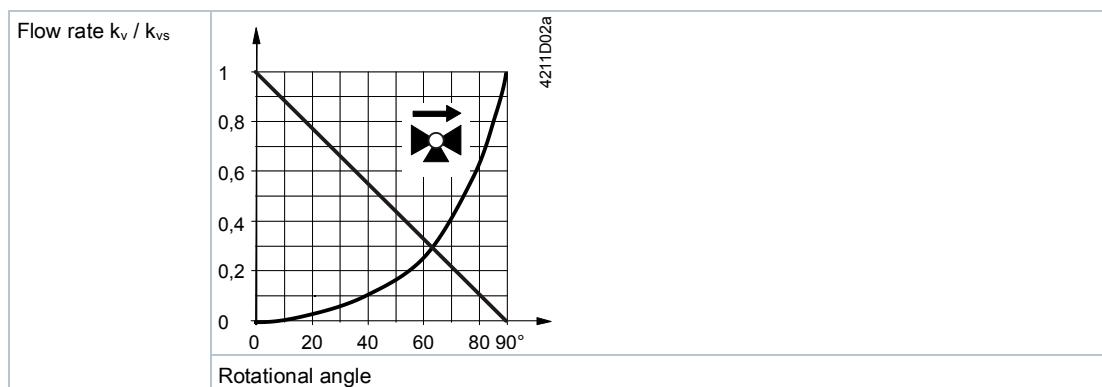

Through-port

### Flow characteristics

0...100 % -> A – AB equal percentage,  $n_{gl} = 3.9$  per VDI / VDE 2173

3-port

### Through-port

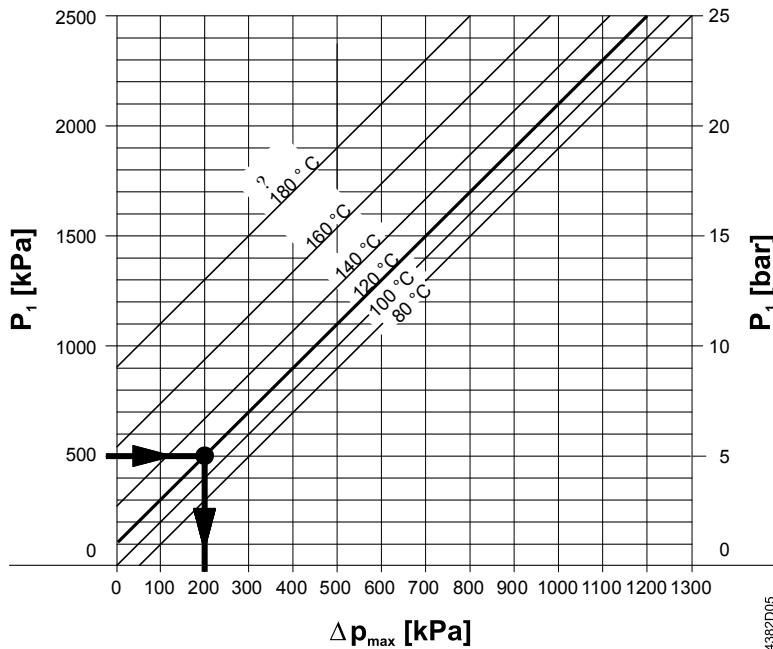

0...100 % -> A – AB equal percentage,  $n_{gl} = 3.9$  per VDI / VDE 2173

### Bypass

0...100 % -> B – AB linear,  $k_{vs}$  greater than 70 % of A – AB

## Cavitation

Cavitation increases wear and tear of the ball and seat and results in unwanted noise. Cavitation can be prevented by not exceeding the differential pressures as per the flow diagram and maintaining the static pressures depicted below.

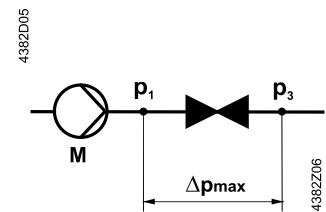

$\Delta p_{\max}$  = Differential pressure at a nearly closed ball valve to largely avoid cavitation

$p_1$  = Static pressure at the ball valve inlet

$p_3$  = Static pressure at the ball valve outlet

M Pump

J Water temperature

Example with hot water:

Pressure  $p_1$  at ball valve inlet: 500 kPa (5 bar)

Water temperature: 120 °C

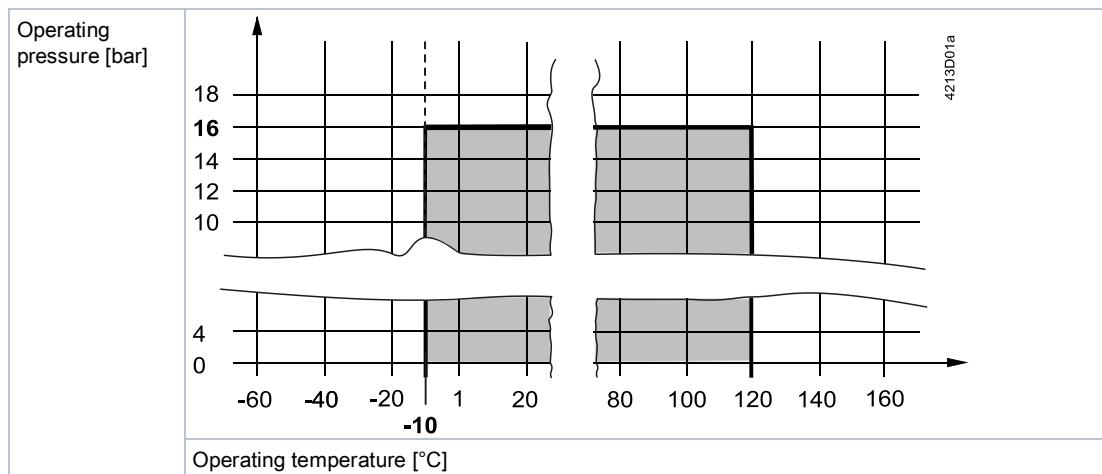

The above diagram clearly indicates that the maximum permissible differential pressure is  $\Delta p_{\max} \rightarrow 200$  kPa (2 bar) at a nearly closed ball valve.

Note on chilled water applications

To prevent cavitation in chilled water circuits, sufficient counter pressure must be supplied to the ball valve outlet, e.g. using an additional butterfly valve downstream of the ball valve. Maximum permissible differential pressure over the ball valve: See 80 °C curve in the above diagram.

## Operating pressure and operating temperature

Liquids:

4213D01a

Operating pressure and medium temperature per ISO 7005  
(Observe all local and applicable laws).

### Type summary

DN = Nominal size

k<sub>vs</sub> = Flow nominal value for chilled water (5...30 °C) through a fully opened ball valve at a differential pressure of 100 kPa (1 bar)

S<sub>v</sub> = Rangeability k<sub>vs</sub> / k<sub>vr</sub>

k<sub>vr</sub> = The smallest kv value at which the characteristic curve tolerances can be maintained at a differential pressure of 100 kPa (1 bar)

## Fittings

Type	Article number	Description
ALG..2	BPZ:ALG..2	2 piece fittings set for 2-port valves, existing of 2 cap nuts, 2 insert nuts, and 2 flat seals.
ALG..2B	S55846-Z1..	ALG..2B are fittings made of brass for media temperatures up to 100 °C
ALG..3	BPZ:ALG..3	3 piece fittings set for 3-port valves, existing of 3 cap nuts, 3 insert nuts, and 3 flat seals.
ALG..3B	S55846-Z1..	ALG..3B are fittings made of brass for media temperatures up to 100 °C

## Insulation shells

Insulation shells are available for heating/cooling insulation as a separate accessory:

Type	Material	Density	Thermal conductivity at tm 40 °C	Operating temperature
ALI..V..G..	Polyethylene foam	29 kg/m <sup>3</sup>	0.0372 W/mK	-10 °C...100 °C

Ball valve	Insulation shell	Stock number	Ball valve	Insulation shell	Stock number

## Ordering

Please indicate material, article type, order text, and quantity; example:

Material	Article type	Order text	Quantity
VAG61.25-16	VAG61.25-16	Ball valve, externally threaded, 2-port	2
GLB161.9E	GLB161.9E	Actuator for ball valve, NSR	2

## Delivery

Ball valves, rotary actuators, and mounting kits are not assembled and are delivered in individual packaging.

## Applications with auxiliary functions

A standard actuator with corresponding functionality can be used if a ball valve application requires a rotary actuator with auxiliary functions (e.g. auxiliary switch or potentiometer). In this case, mounting kit ASK77.x is required in **addition** to the rotary actuator.

Follow the mounting instructions when mounting.

Rotary actuator	Options	Order text: Mounting kit
GMA..1E (with spring return)	Potentiometer, auxiliary switch	ASK77.2 Accessory Kit BV for GMAxx1.9E
GDB..1E / GLB..1E (without spring return)	Potentiometer, auxiliary switch	ASK77.3 Accessory Kit BV for GLBxx1.9E
GQD..1A (with spring return)	Auxiliary switch	ASK77.4 Accessory Kit for BV GQDxx1.9A

Note:

GAP19../GNP19.. are not compatible with mounting kit ASK77.2.

## Product documentation

Related documents such as environmental declarations, CE declarations, etc., can be downloaded at the following Internet address:

## Notes

### Safety

#### **⚠ DANGER**

**There is a risk to operating personnel and device when working on the unit**

Failure to comply with these safety notes can result in personal injury and damage to property from pipe pressure, electrical voltage, or device in operation.

▷ Note the following when servicing a ball valve/rotary actuator:

- Switch off both pump and operating voltage.
- Close shutoff valves.
- Release pressure in the pipes and allow them to cool down completely.
- Disconnect electrical connections from the terminals as needed.
- The rotary actuator must be properly installed prior to recommissioning the ball valve.

#### **⚠ CAUTION**

##### **National safety regulations**

Failure to comply with national safety regulations may result in personal injury and property damage.

- Observe national provisions and comply with the appropriate safety regulations.

## Engineering

We recommend installing the ball valve with spring return since temperatures are lower on heating plants which increases the lifespan of the sealing gland on the stem.

Ensure there is no cavitation (see Section Technical design [→ 2]).

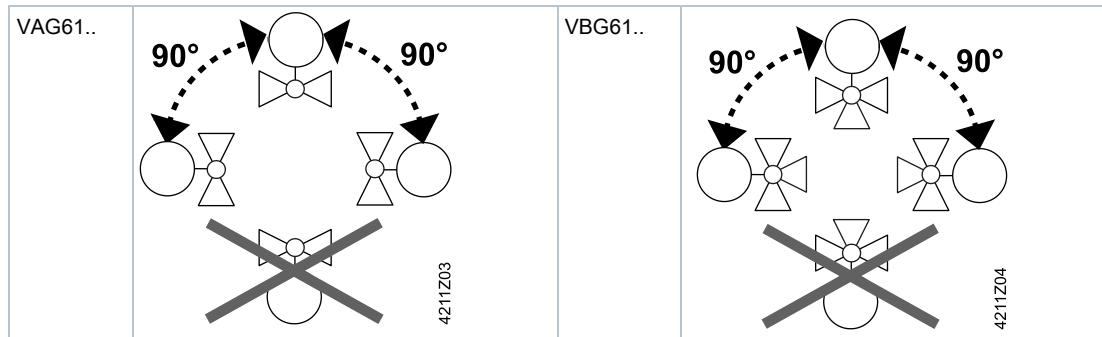

A filter must be installed upstream of the ball valve to increase functional safety.

## Mounting

It is easy to assemble the ball valve and rotary actuator; it can be done at the construction site. No special tools or settings required.

Ball valve VAG61.. / VBG61.. is supplied together with mounting instructions M4212 (74°319°0922°0).

### Mounting position

### Pipe connection

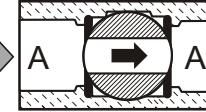

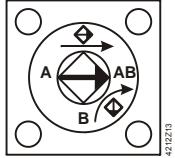

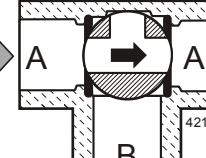

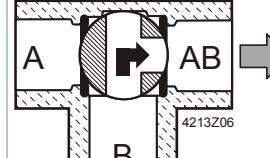

Avoid leakage:

- Install fittings as per ISO 7-1. Ball valves (internal threading) = "Rp"; Piping (external threading) = "R".
- Do not use too much hemp or PTFE tape.
- Do not tighten pipe threading to the very end.
- Place the pliers/wrench on the ball valve union nut that is closer to the pipe to be tightened or loosened.

### Flow direction

Make sure that the valve is mounted in the proper flow direction. A symbol is applied to the ball valve body:

Ball valve	Laser marking	Position as delivered	90 ° turned (clockwise)
VAG61.. Control ball valve 2-port	-	 4213Z01	 4213Z02
VBG61.. Control ball valve 3-port	 4212Z13	 4213Z05	 4213Z06

## Maintenance

---

Ball valves VAG61.. and VBG61.. are maintenance free.

## Disposal

---

Do not dispose of the device as part of domestic waste.

- Special handling of individual components may be required by law or make ecological sense.
- Adhere to all local and currently applicable laws and regulations.

## Warranty

Technical data on specific applications are valid only together with Siemens products listed under "Equipment combinations". Siemens rejects any and all warranties in the event that third-party products are used.
